MasterKey 3.0 Build No. 2023.05.17.2022

This revision of MasterKey3 is for **REVIT 2022 onwards**

Features:

1. Drawing keynotes can now be digitally linked with a hyperlink to the related clause in the project specification. This new functionality gives the REVIT user the ability to Cloud Issue the specification and then link the keynotes on the drawings. Each drawing set can be linked to a versioned snapshot of the online cloud-based specification.

2. Any REVIT 2023 MasterKey 3 project can now be shared with other MasterKey licensed practices. By using the Access functionality in the Masterspec specification project, practices can collaborate on any MK3 keynoted project. The permissions can only be allocated by an administrator from the project specification "Access" TAB. Once activated these projects become visible and accessible to licensed MK3 REVIT users in their palette below their primary practice projects, under practice named folder.

3. The addition of 'Detail Notes' allows for an alternate keynote description to be entered against Specification and Custom Keynotes. This can be done both from the REVIT MasterKey3 App and from Masterspec project specification in the project Keynote Tab.

4. New 'Quick-Key' option to drop the keynote or its alternate 'Detail Note' on the drawing set using the SHIFT or CTRL keys.

5. Status and access permission logged and displayed. REVIT users are notified on shared access projects (including BIM360) if they own or who owns the keynote table and whether they can or cannot write to the shared central file to update the keynotes.

6. New palette is linked to MasterBIM providing various NZ BIM schemas with their parameter definitions. This allows users of this Web application to build and maintain their own project schemas and export them as REVIT or excel files.

7. Improved and larger graphic icons in the MK3 ribbon these also scale to your selected screen ratio.

8. MasterKey3 is compatible with REVIT22 and REVIT23

9. Any MasterKey2 project can be upgraded, and the current MK2 keynotes will be accessible in MK3. Additional MK3 functions and features like Cloud Issue and new keynote styles (Detail) are not able to be accessed and used retrospectively with MK2. MK3 and MK2 should not be used on the same project and once upgraded a project cannot be reverted to MK2.
