

MasterKey 2.0 Updated Build No. 2020.12.23.

This revision of MasterKey2 is for Revit 2021, 2020 and 2019

[Updates and Fixes released on 23.12.2020](#)

Updates

1. None

Fixes

1. A limited number of users have noted an irregular 'hanging' of MasterKey in the process of writing to the REVIT Keynote table on both BIM360 and Shared Models. This is identified by the process bar on the MK palette looping with the instruction "Reloading the Revit Keynote Table". Some Users have also noted they then have limited functionality of REVIT and are not able to select model items. We have identified that MasterKey finishes the writing process to the table but that Revit is inconsistent in returning the instruction and does not release the model. This causes the looping process and does not allow the full functionality of Revit. This new build rectifies this by combining the calls to update the local and central model tables.

NB. Please ensure all users within your organisation have the same build number when working on a workshare project.
